CAREER SUMMARY.

Early-career software and AI engineer currently interning at LinkedIn, where I build AI-driven automations and full-stack tools that streamline enterprise marketing operations. Comfortable across the stack with Python, JavaScript/TypeScript, and SQL, with a focus on applying large language model APIs to turn unstructured inputs into reliable, production-ready output. Quick to pick up new tools, codebases, and domains.

TECHNICAL SKILLS.

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS

Frameworks & Libraries: Node.js, React, Next.js, Three.js, Framer Motion

AI & LLM: LLM APIs (Anthropic Claude), prompt engineering, structured tool-use / function calling, AI-assisted data analysis, schema validation (Zod) **Data:** SQLite, ETL & data cleaning, Power BI, Excel

Tools & Practices: Git, Agile, release management, REST & SOAP APIs, Postman, Trello

EXPERIENCE.

LinkedIn — GPO MarTech Intern

Feb 2026 – Present

South San Francisco, CA (Hybrid)

- Built a Node.js monitoring dashboard that integrates a marketing platform through SOAP and REST APIs and persists health and status data to SQLite, used daily by leadership teams for real-time visibility.
- Designed AI-driven automation prototypes that generate marketing-campaign configurations and responsive email HTML from plain-language briefs, using large language model APIs (Anthropic Claude) with structured tool-use and Zod schema validation.
- Maintained 10 to 15 Stensul email modules on a biweekly cadence, setting up, reviewing, and pushing changes live with internal stakeholders.
- Automated recurring weekly data export and backfill requests in Python, building repeatable processes that supported the data science and marketing teams.
- Migrated 1,300+ image assets from disparate platforms into the central Adobe EDAM digital asset management system, improving consistency and retrieval.
- Investigated and resolved edge cases in campaign template logic, proposing code-based fixes and documenting best practices with engineers and marketers.

CAM EDU — Program Assistant

Mar 2024 – Aug 2025

Millbrae, CA

- Cleaned and maintained student data in Excel and Python, reconciling rosters and validating records to ensure accurate class placement.
- Built tracking dashboards and internal tools (Google Sheets, Figma, Trello) to streamline day-to-day program operations.
- Coordinated up to 4 concurrent programs and led teams of 5 to 10 using Agile boards in Trello, and taught programming and robotics to students from TK through middle school, designing lesson plans and assessing progress.

Foothill College — Student Tutor, Programming & Mathematics

Apr 2022 – Jun 2022

Los Altos Hills, CA

- Tutored students one-on-one in programming (mainly Java and JavaScript) and mathematics, tailoring each session to the learner's style to build problem-solving confidence.

Dev/Mission — Software Pre-Apprentice & IoT Teaching Assistant

Feb 2021 – Aug 2021

San Francisco, CA

- Served as Teaching Assistant for a Google-engineer-led IoT course, guiding about 20 students per class through hands-on Particle Photon and sensor projects, including creating quizzes, debugging code and circuits, and giving one-on-one coding help.

PROJECTS.

Multi-Agent AI Orchestration System (prototype) · Node.js, WebSocket, LLM APIs

- Prototyped a system that coordinates multiple LLM-powered agents to plan and execute multi-step tasks, with a real-time canvas UI for monitoring agent activity and messaging.

Personal Portfolio Website · React, Three.js, Framer Motion

- Designed, built, and deployed an interactive personal site with 3D components and animation, handling build tooling and deployment on GitHub Pages.

EDUCATION.

Year Up United — Data Analytics Program	(SQL, Python, Power BI; three capstone projects)	Aug 2025 – Feb 2026
Stanford University, Summer Session — Computer Science	(CS 193C: Client-Side Internet Technologies)	May 2024 – Aug 2024
Foothill College — Computer Science Coursework (Java), transferable credits	· OOP, data structures, and algorithms
