CAREER SUMMARY

Software engineer working across the stack in Python, TypeScript, SQL, and Node.js/React. Builds backend services and monitoring dashboards, integrates SOAP and REST APIs with persistent storage, and develops LLM-powered tools with structured tool-use and Zod schema validation. Focused on shipping software that runs reliably in daily use. Anthropic AI Fluency certified. Available immediately for full-time software engineer roles.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS

Frameworks & Libraries: Node.js, React, Next.js, Three.js

AI & LLM: Generative AI with Claude APIs (Anthropic), prompt engineering, structured tool-use / function calling, AI-assisted data analysis, schema validation (Zod)

Data: SQLite, ETL & data cleaning, Power BI, Excel

Tools & Practices: Git, REST APIs, Postman, Agile

EXPERIENCE

LinkedIn — GPO MarTech Intern

Feb 2026 – Jul 2026

South San Francisco, CA (Hybrid)

- Built a Node.js monitoring dashboard that integrates a marketing platform through SOAP and REST APIs and persists health and status data to SQLite; checked daily by the team to confirm system health.
- Designed AI-driven automation prototypes that generate marketing-campaign configurations and responsive email HTML from plain-language briefs, using Claude APIs (Anthropic) with structured tool-use and Zod schema validation.
- Investigated edge cases in campaign template logic and proposed code-based fixes, documenting best practices with engineers and marketers.
- Supported the marketing team by automating recurring weekly data export and backfill requests in Python.
- Supported marketing operations on LinkedIn-owned systems: maintained 10-15 Stensul email modules on a biweekly cadence and assisted with migrating 1,300+ image assets into the Adobe EDAM digital asset management system.

CAM EDU — Program Assistant

Mar 2024 – Aug 2025

Millbrae, CA

- Cleaned and maintained student data in Excel (student pickup and sign-up forms) and kept documentation of every parent form to ensure accurate class placement.
- Taught my own STEAM/tech class to students in grades 1-8: designed lessons, led the class, and assessed student progress.

Foothill College — Student Tutor, Programming & Mathematics

Apr 2022 – Jun 2022

Los Altos Hills, CA

- Tutored students one-on-one in programming (mainly Java and JavaScript) and mathematics, tailoring each session to the learner's style to build problem-solving confidence.

Dev/Mission — Software Pre-Apprentice & IoT Teaching Assistant

Feb 2021 – Aug 2021

San Francisco, CA

- Interned in Dev/Mission's IoT program taught by Google engineers: worked alongside them, supported students, created quizzes, and led one of the lessons.
- Completed the 160-hour Pre-Apprenticeship: IT fundamentals, intro programming (HTML, CSS, JavaScript), and IoT.

PROJECTS

Job-Application Automation Pipeline · Python, Claude API, Gmail & Google Sheets APIs, browser automation

- Built and operate a multi-stage pipeline: role discovery and scoring, LLM-tailored cover letters validated against a verified-claims file to prevent fabrication, inbox and spreadsheet sync, and automated form-filling with human review before every submission; used for 100+ real applications.

Multi-Agent AI Orchestration System · TypeScript, Node.js, WebSocket · github.com/apicad/AI-agent

- Extended an open-source agent-visualization project into a standalone web app that orchestrates fleets of Claude Code agents: built the Node.js backend with an HTTP/WebSocket control bus, hook-based live status tracking, and fleet spawning and messaging, with activity rendered in the project's real-time pixel-office canvas.

Hospital Analytics System · SQL, Power BI

- Designed, implemented, and populated a relational SQL database (patients, doctors, departments, appointments, medications); analyzed appointment, prescription, and workload trends; built a Power BI dashboard covering appointment counts, physician activity, and patient geographic distribution.
